

NJD Quartet Lighting Effect

These lights are used as stage lights for bands,djs or public speaking. The Quartet has four 300-Watt lamps fitted with four dichroic filters; blue, red, amber and green.

Requiring only a mains input per channel the Quartet can be connected to any standard lighting controller to provide bright and efficient stage lighting. All four channels lit simultaneously provide 1200 Watts of white light. Dimming can achieved using a standard dimming controller which will come with the lights. They can be mounted on heavy duties stands or truss and can also be sat on the floor. suitable for all small to medium venues
